

## Lateral side sliding garage door

### *SINGLE LATERAL DOOR SLS*

The particular lateral sliding opening system works through a rail on the ceiling which allows the best use of garage space and the maximum passage. Maximum width available **W = 6 m** and maximum height available **H = 3.25 m**.

### *DOUBLE LATERAL DOOR SLD*

When a door of large dimensions is required, the double opening version is available. Maximum width available **W = 12 m** and maximum height available **H = 3.25 m**.

### *FUNCTIONING*

The panels slide thanks to a lintel rail without using floor carriages. The hermetic closure of the door is guaranteed by a combination of rubber seals and brushes on all the perimeter.
